

REMARKS

Applicant's new undersigned Attorney thanks the Examiner for a kind and thorough examination of this Application. New claims 47-50 have been added which define the invention as one which is adapted to allow a system of dissimilar transducers to communicate by the use of a common hierarchal format (see, for example, paragraph 3 of the pending Application). Particularly, as is set forth in newly added claims 48-50, this is accomplished by ensuring that each diverse transducer communicate its model followed by its data in this standardized hierarchal format (e.g., see, for example, paragraphs 106 and 137 of the pending application). The claimed "system of transducers" found in pending claims 1-26 and 42-46 refer to a configuration of diverse transducers (see, for example, paragraph 46 and 136 of the Application). None of the art of record teaches or discloses the use of a system of diverse transducers or the other features which form the new claims. These issues were discussed during the interview which was conducted on February 21, 2006. A Clean Copy of Claims has been added to provide clarity for the Examiner.

Please charge our deposit account # 03-1723 for any additional charges that might be required and consider the response to include a petition for any required extension of time.

If there are any further questions regarding this matter, please call the Applicant's undersigned Attorney at (248)-324-7787. For the above-referred reasons, all of the pending claims are allowable and such allowance is requested.

Respectfully submitted,

John G. Chupa (Reg. No. 33,483)
